

Hi-Spec Engineering PD20 Push-Off Dump Trailer

Hi-Spec Engineering's push-off dump trailer is the most reliable, efficient and safe option on the market for transporting and off-loading materials.

This powerhouse of a multi-purpose trailer is perfect for use with wide range of construction and agricultural materials. It can off-load quickly and safely on slopes, even when parked at an angle - as no tipping is required. This key feature allows for maximum stability and flexibility on rough terrain such as hilly or uneven ground.

Features & Benefits

Off-loading

- Off-loading can be performed safely on slopes or while parked at an angle.
- Off-loading can take place in tight spaces with height restrictions.
- Part loads can be off-loaded.
- Off-loading can be carried out while on the move.
- Once off-loaded, the tailboard can be closed, and the trailer can move off as the headboard retracts. (No waiting is required for the body to return to the chassis).
- Trailer can be off-loaded if stuck/bogged (unlikely).
- Push-off mechanism can push a payload of up to 28,000kgs.

During Use

- Capacity of 20T +/- Volume — 10.5m³ (water level); 14.5m³ (heaped).
- Low centre of gravity ensures maximum stability on the road.
- Low profile ensures easy loading from the sides.
- Little or no cleaning is needed (e.g., wet topsoil is unable to stick to side/floor when pushed along the unit during off-loading).
- Clear field of vision makes it easy to see the load from the tractor cab.
- Very smooth to pull, as fitted with hydraulically-sprung drawbar

Hi-Spec Engineering PD20 Push-Off Dump Trailer Specifications & Features

Materials Tested

- Washed pebble
- 6mm washed blacktop
- 10mm washed blacktop
- 4" stone filling
- Plant screenings

- Granite boulders
- Clay filling (wet & dry)
- Crushed concrete
- Subsoil (wet & dry)
- Topsoil (wet & dry)
